

IT2080 – ITP

Year 2, Semester 2, 2024

Activity 3

Employee Welfare Management System

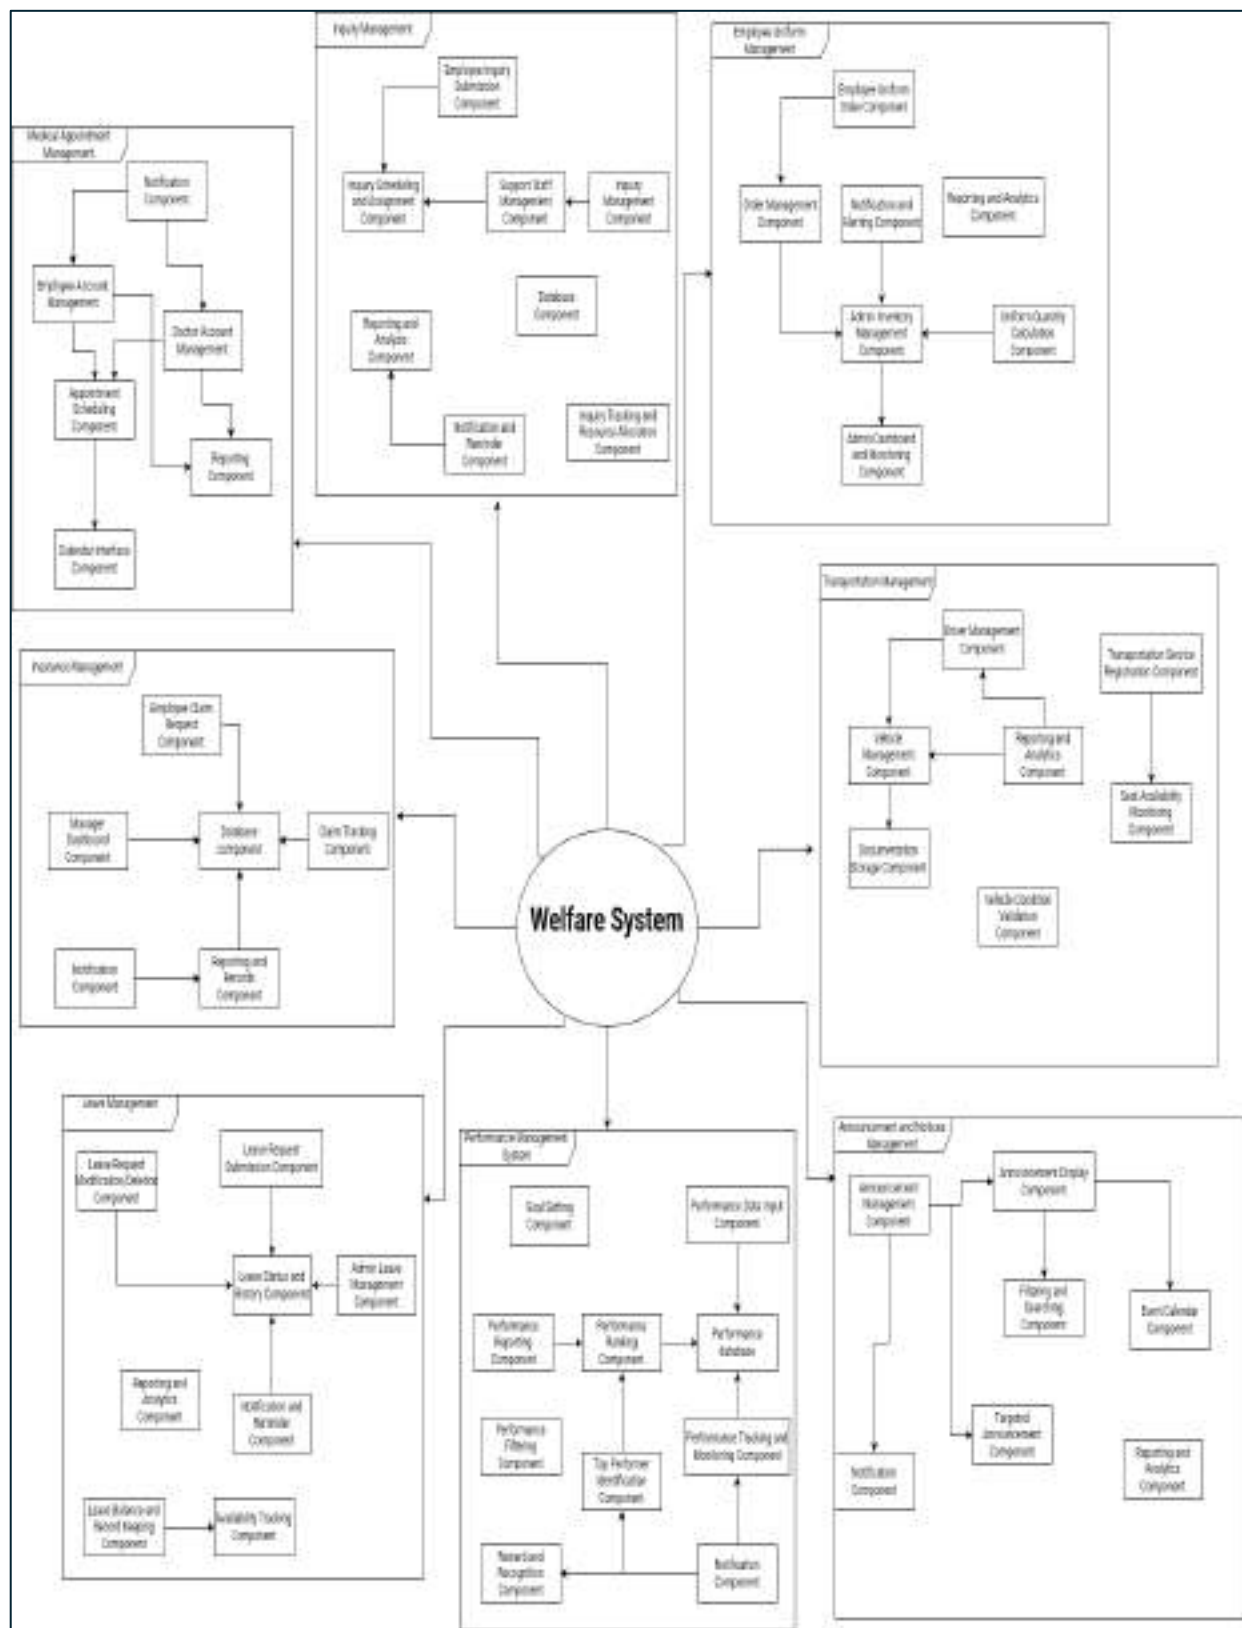

Group Details

Batch: 1.1

Group Number: ITP24_B1_06

	Student Registration Number	Student Name
1	IT22066466	PALLIYAGURU M D
2	IT22059536	FERNANDO T K
3	IT22060358	DE SILVA K W S C
4	IT22069672	BOLONGHE W D U
5	IT22065544	WEERAKOON M M
6	IT22191588	LIYANAGE D D
7	IT22094322	SENEVIRATNE D V
8	IT22102614	WAHALATHANTHRI D B D

Components

Non functional requirements

Security

Access control

In our implementation, we'll incorporate role-based access control (RBAC) to manage access to sensitive functionality and data within the system. We'll define distinct roles such as "Employee," "Benefits and Compensation Specialist," "Doctor," "HR Supervisor," "Logistics and Operations Manager," "Employee Relations Specialist," and "Admin." Each role will be assigned specific permissions tailored to their responsibilities and access requirements. By implementing RBAC, we ensure that users are granted appropriate levels of access based on their roles, enhancing security and privacy throughout the system.

Secure Document Upload:

In our system implementation, we prioritize security by implementing thorough validation checks for uploaded documents, ensuring that only legitimate files are accepted to prevent any potential threats from malicious uploads. Additionally, uploaded documents are stored in a secure location, accessible only to authorized personnel. By restricting access to these documents, we maintain confidentiality and protect sensitive information from unauthorized access or exploitation. These measures collectively bolster the system's integrity and safeguard against potential security risks associated with file uploads.

Secure Notifications:

To enhance the security of our notification system, we're implementing a protocol to avoid including sensitive information in notification messages. By refraining from including such data, we minimize the risk of unintentional exposure or unauthorized access to confidential information. This proactive measure ensures that notifications serve their intended purpose of alerting users without compromising the confidentiality of sensitive data. By prioritizing data protection in our notification strategy, we uphold the integrity and privacy of our system's communications, mitigating potential risks associated with data exposure.

Performance

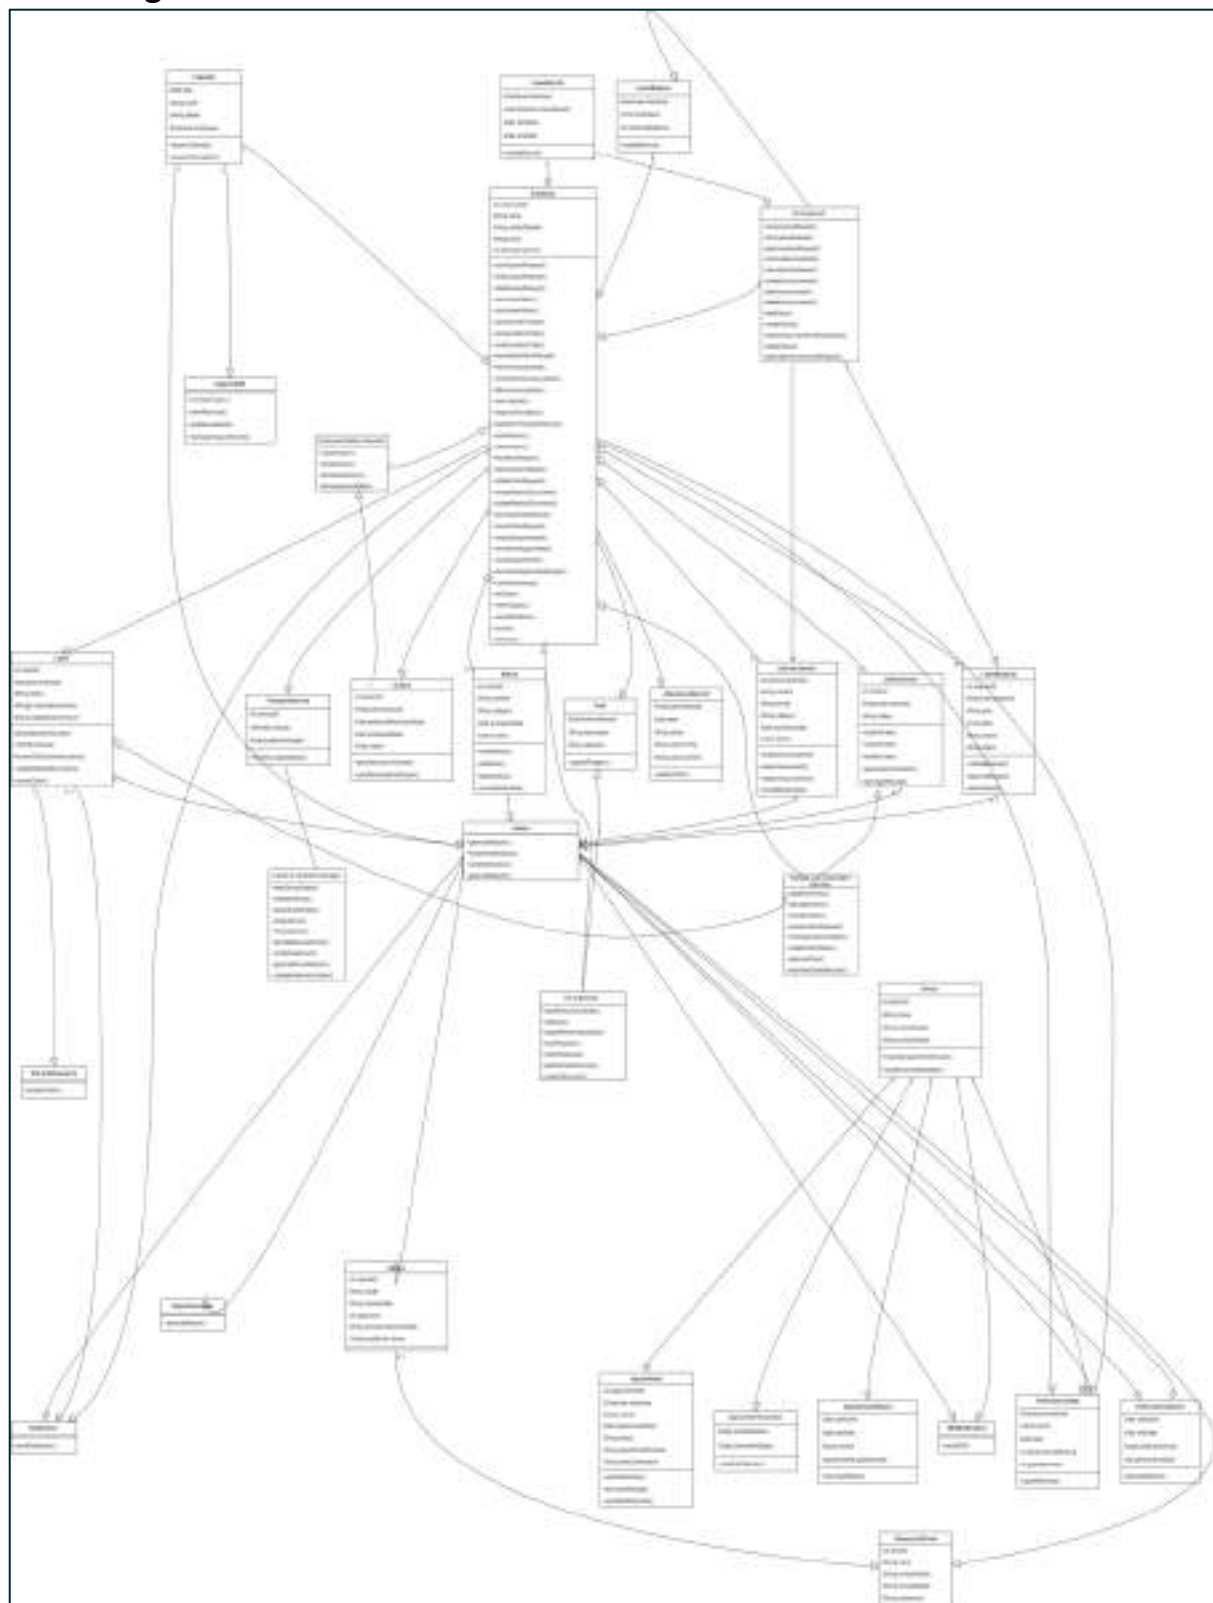

Efficient database design

We'll implement a MongoDB database for an Employee Welfare System, covering Leave Management, Announcement, Performance Management, Transport Management, Uniform Management, Inquiry Management, Insurance Management, Doctor Appointment Management, and Employee Performance Management. We'll carefully design the schema, identifying entities like employees, announcements, leave requests, and performance evaluations. Collections will be created for each entity, with indexes on commonly queried fields for improved performance. We'll use embedded documents and arrays for efficient data representation and consider denormalization to optimize query speed.

Performance Testing and Optimization:

To enhance the security of our notification system, we're implementing a protocol to avoid including sensitive information in notification messages. By refraining from including such data, we minimize the risk of unintentional exposure or unauthorized access to confidential information. This proactive measure ensures that notifications serve their intended purpose of alerting users without compromising the confidentiality of sensitive data. By prioritizing data protection in our notification strategy, we uphold the integrity and privacy of our system's communications, mitigating potential risks associated with data exposure.

Class Diagram

Third Party Components

1. Twilio:

- Purpose: Twilio is a cloud communications platform that enables us to send and receive SMS messages, make and receive phone calls, and perform other communication-related tasks programmatically.
- Usage: Twilio is used to send SMS notifications and reminders to employees.

2. Nodemailer:

- Purpose: Nodemailer is a module for Node.js applications that allows facilitates sending emails easily.
- Usage: Integrate Nodemailer for sending emails for various purposes, such as sending monthly reports.

3. React DatePicker:

- Purpose: React DatePicker is a customizable datepicker component for React applications that allows users to select dates easily.
- Usage: React DatePicker is used to provide a user-friendly interface for selecting appointment dates when scheduling appointments, and to dynamically display the available dates.

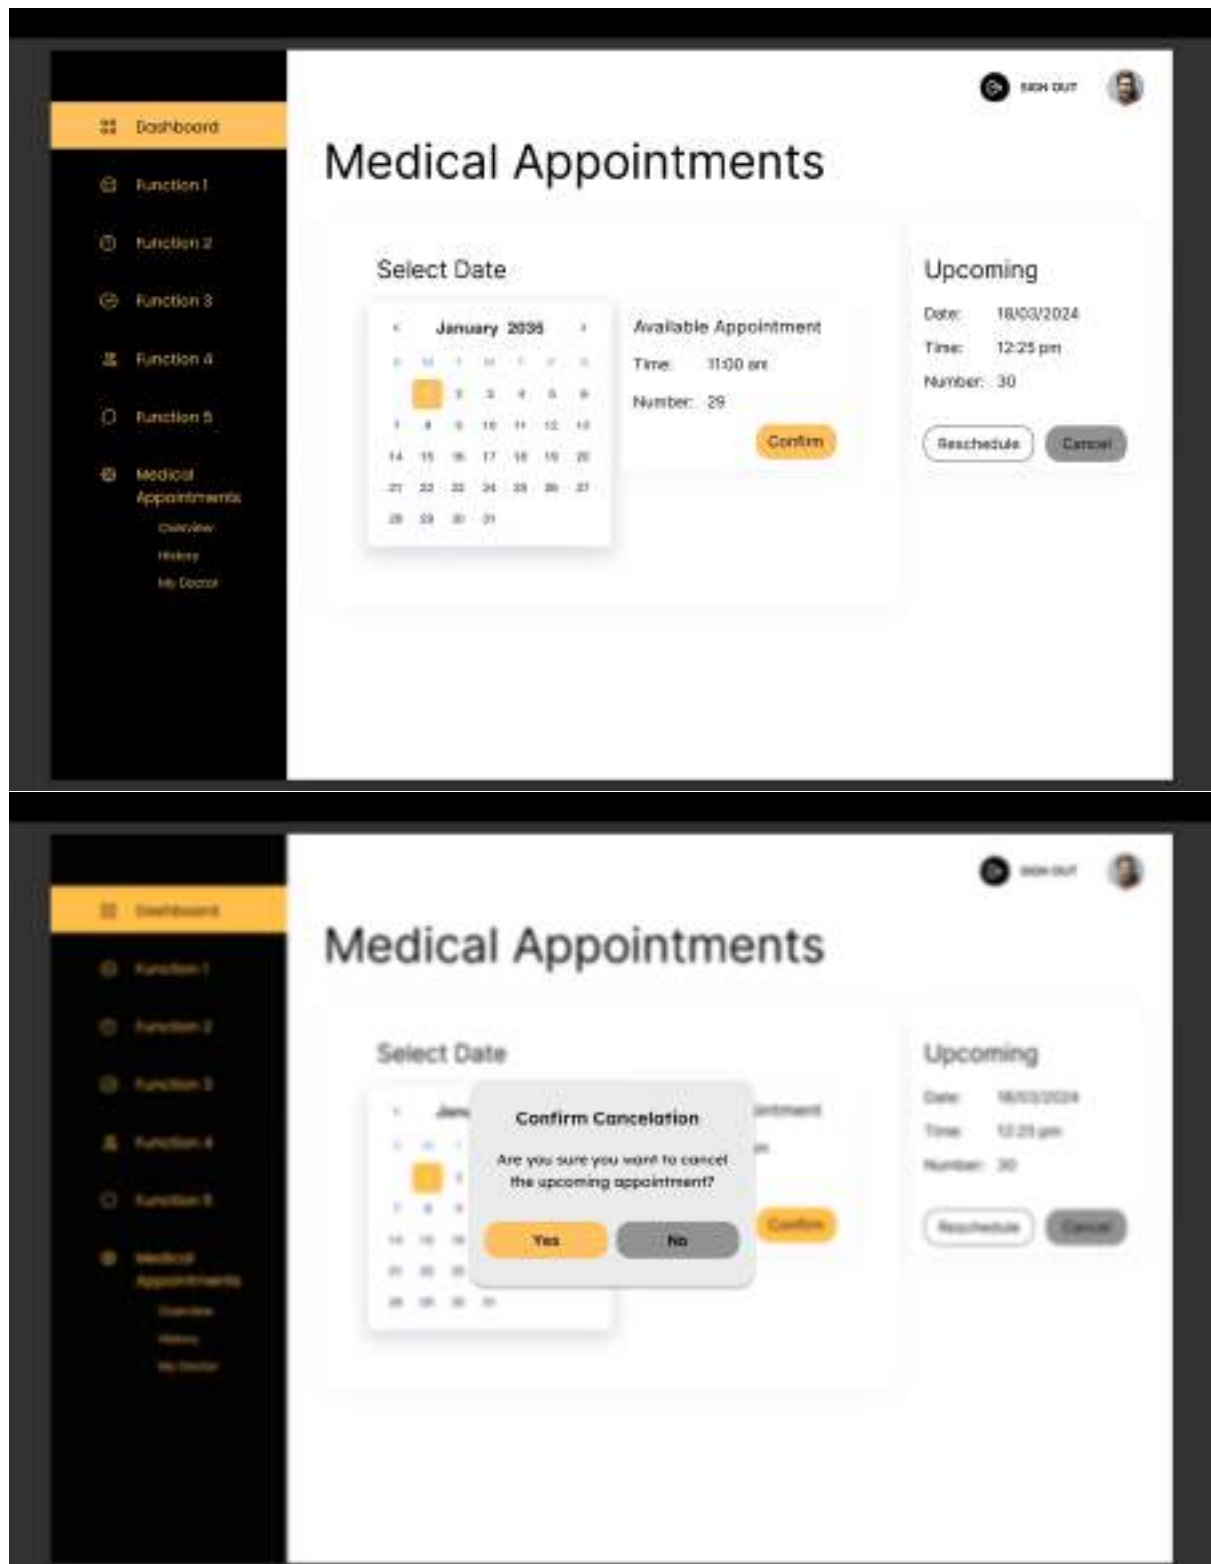

4. Ant Design:

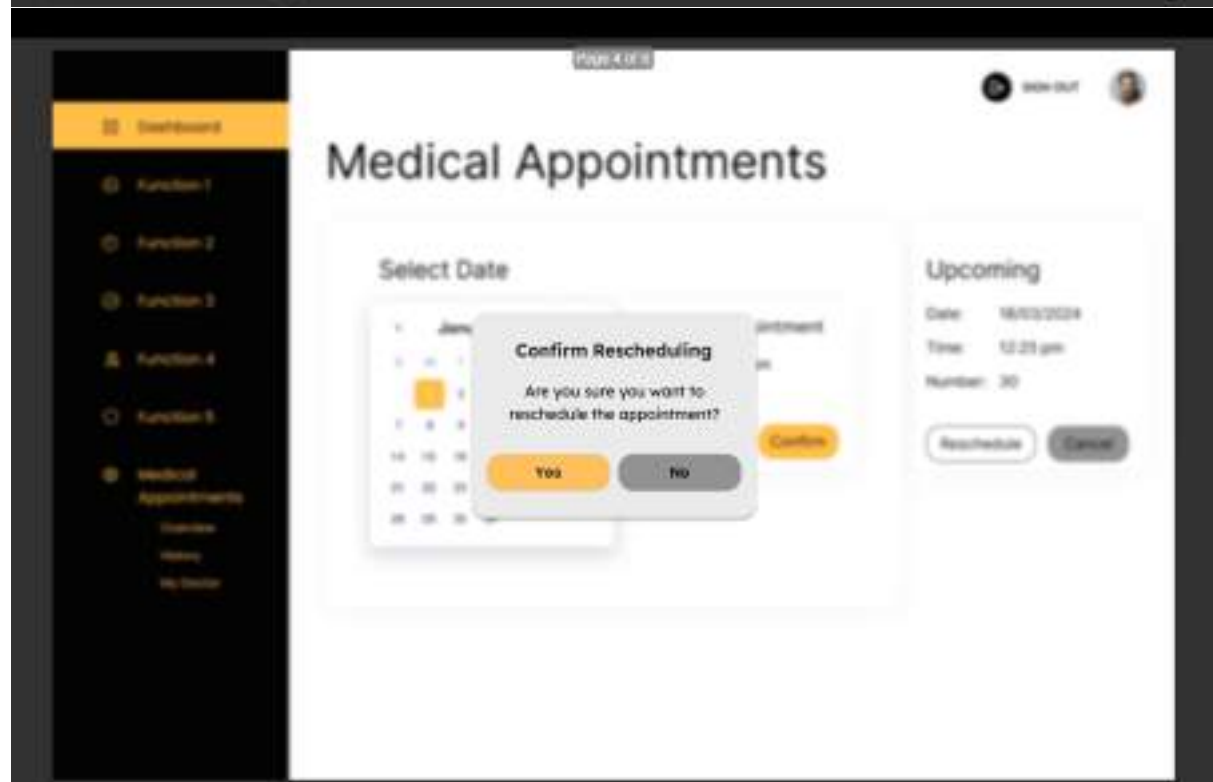

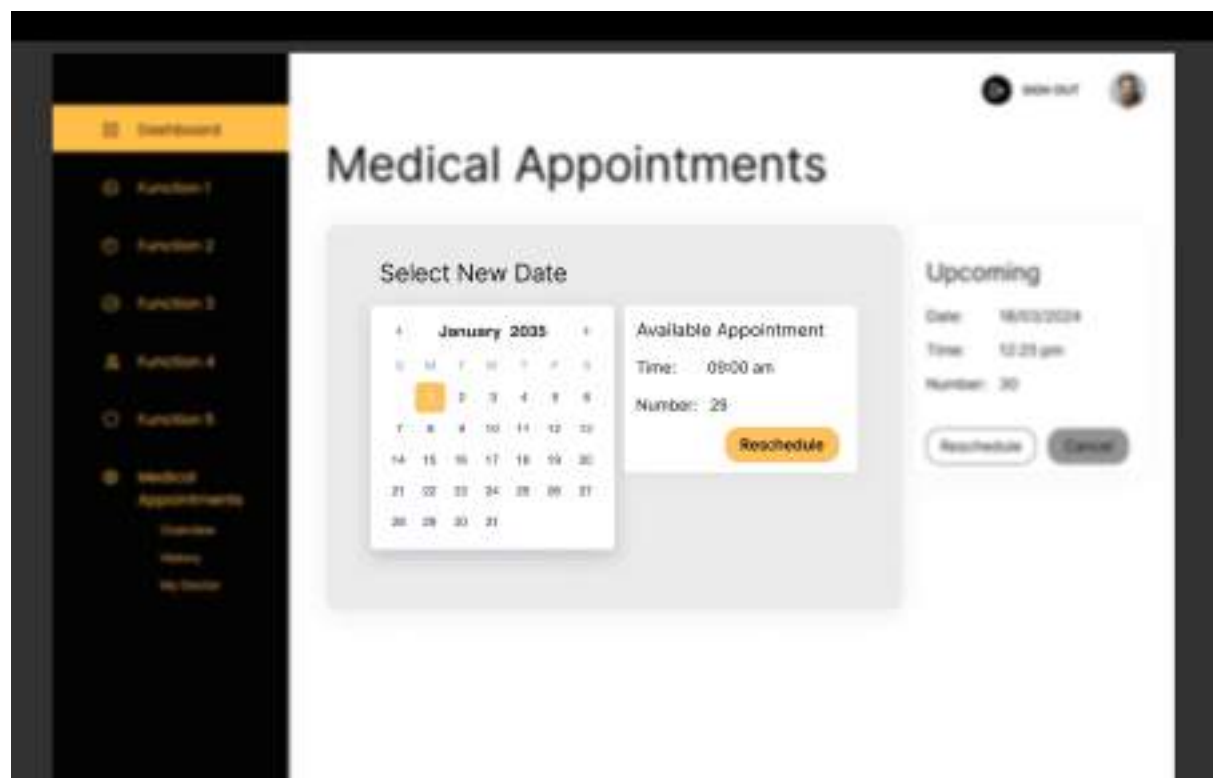

- Purpose: Ant Design is a React UI library with a set of high-quality components and layouts for building modern web applications.
- Usage: Ant Design components are used to create a visually appealing and responsive user interface. Components like forms, buttons, layouts, and navigation elements can be utilized to enhance the user experience.

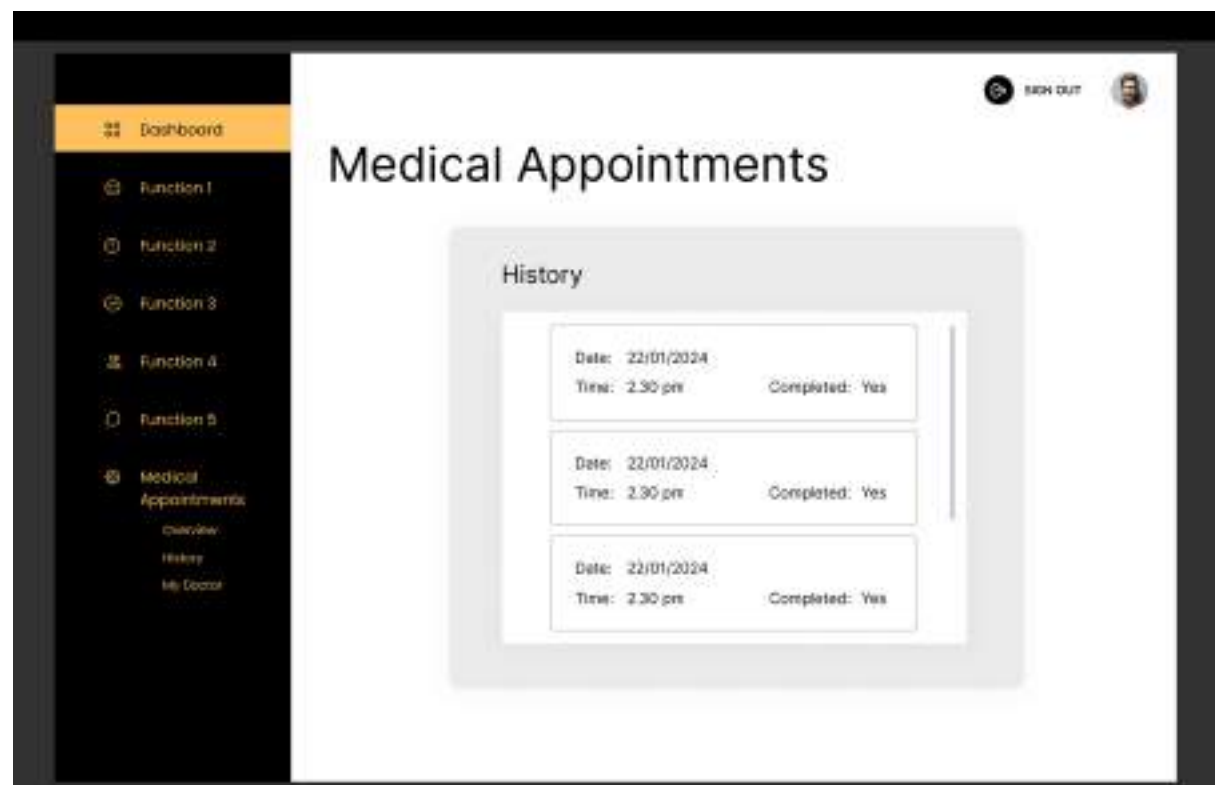

5. SweetAlert2:

- Purpose: SweetAlert2 is a JavaScript library for creating customizable and beautiful alert, confirmation, and prompt dialogs.
- Usage: SweetAlert2 can be used to display informative and visually appealing alerts or confirmation dialogs for purposes such as operation cancellations, notify users of successful operations, or display error messages.
